Class 1

Generative AI vs Agentic AI

Generative AI

↳ Generative AI refers to a class of AI models that can create new content - such as text, images, audio, code, or video - that resembles human-created data.

Example

↳ LLMs based → Chat GPT.

↳ Diffusion models for images

↳ code generating LLMs like CodeLlama

↳ TTS models like Elevenlabs

↳ Text to speech

↳ Video gen models like Sora

Traditional AI

→ Traditional AI is about finding patterns in data and giving predictions.

Generative AI

→ Generative AI is about learning the distribution of data so that it can generate a new sample from it.

↳ The best part of Generative AI is that it can mimic humans.

Application Areas

→ Creative and Business Writing
→ Software Development
→ Customer Support
→ Education
→ Designing

Generative AI is constantly evolving and improving.

Generative AI is about creating content, Agentic AI is solving a goal.

Generative AI is reactive, Agentic AI is proactive (autonomous).

Generative AI is a building block of Agentic AI.
